

State Route 18

Raised Curb Median

Fact Sheet

June 2018

OQ120
0800020125

Purpose & Need

This project will widen State Route 18 (SR-18) and construct a raised curb median from Cobalt Road to the United States Highway 395 in Victorville, San Bernardino County to reduce the occurrences of cross-median collisions. The project also constructs left-turn lanes to reduce the occurrences of rear-end type collisions by enhancing the free-flow movement of the through lanes.

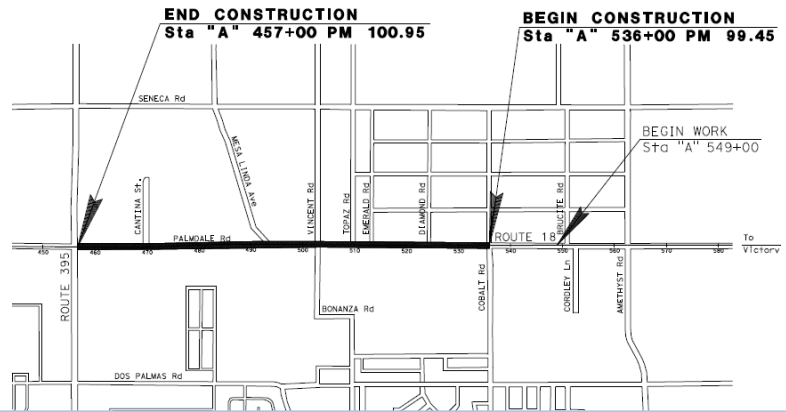

Project Features

Project features include roadway widening to provide two-foot inside shoulders, a raised curb median, 8-foot wide right shoulders in the southbound direction, and 4 to 8-foot wide in the northbound direction. A rumble strip will be installed within the shoulder to alert drivers when departing the travel way. A retaining wall and a 6-foot Class 2 bike lane will be added. Guardrail will be upgraded to current standards, some driveways will be reconstructed, and mail boxes relocated.
